New lung specific nucleic acid useful in gene therapy or as vaccines for treating lung cancer (e.g. squamous cell carcinoma) or non-cancerous lung diseases, as well as for diagnosing, monitoring or staging these diseases.

Claim 11; Page 239-242; 282pp; English.

The present invention describes an isolated lung specific nucleic acid (LSNA) comprising a sequence that: (a) encodes any of the 93 amino acid sequences comprising 17 - 733 amino acids, given in ABPES873 to ABPES965; (b) comprises any of 115 sequences comprising 148 - 3193 base pairs (bp), given in ABQ75262 to ABQ75376; (c) selectively hybridises to (a) or (b); or (d) has 60 % sequence identity to (a) or (b). LSNA and LSPS sequences have cytostatic activity and can be used in gene protein (LSP) sequences have cytostatic activity and can be used in gene monitoring the presence and metastases of lung cancer in a patient. An antibody that specifically binds to an LSP can be used for determining the presence of an LSP in a sample, as well as for treating a patient

with lung cancer, particularly by inducing an immune response against the lung cancer cell expressing the LSNAs or LSPs. In particular, these LSNAs and LSPs are useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer (e.g. squamous cell carcinoma) and non-cancerous disease states in lung

The present invention relates to human proteins and coding sequences of molecules for disease detection and treatment MDDT. The sequences can be used in the treatment of diseases associated with the decreased expression or overexpression of MDDT, such as cell proliferative (cancer, atherosclerosis, hepatitis), autoimmune/inflammatory (e.g. AIDS, allergies, Addison's disease, asthma), developmental (dwarfism, renal tubular acidosis), neurological (e.g. stroke, Parkinson's disease, epilepsy) and cardiovascular (congestive heart failure, myocardial infertion, angina pectoris) disorders. The present sequence is a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             human molecules for disease detection and treatment (MDDT), useful diagnosing, treating and preventing diseases or conditions associated the aberrant MDDT expression, e.g. cancer, AIDS, asthma, diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

The invention relates to 971 novel human CDMA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The ADC30889 and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDMAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody compained by the invention; and methods of polymucleotides or polypeptides of the invention; and methods of invention are methods of peventing, treating or ameliorating a medical condition; kits comprising polymucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention; methods for the identification of compounds that modulate the expression or activity of the polymucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDMA sequences of the invention or activity of the polymucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDMA sequences of the invention or activity of the polymptides encoded by the contigs (ADC32628 - ADC33394). The nucleic acids and polypeptides encoded by the contigs (ADC32628 - ADC33394). The nucleic acids and polypeptides of the invention are context of identification of mutations responsible for genetic disorders or other traits, for assessing blodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disparses and other neurodegenerative diseases, andemed or treating diseases such as Parkinson's disease, Alzheimer's disparse or accorded by the control or accorded by the control or accorded by the control or accorded by the control or accorded by the control or accorded by the control or accorded by the control or accorded by the control or accorded by the control or accorded by the control or accor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human polypeptide sequence of the invention. Note: The sequence was obtained in electronic formmat directly from WIPO at the wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

New purified secretory polypeptides and polynucleotides, useful in the diagnosis, study, prevention or treatment of diseases associated with decreased expression of functional secretory molecules, e.g. AIDS, cancer or allergies

Claim 27; Page 304-305; 340pp; English.

The invention describes an isolated polynucleotide a naturally occurring polynucleotide sequence at least 90 % identical to it, a polynucleotide complementary to it or an RNA equivalent of it. The purified secretory polypeptides (SPTW) and polynucleotides are useful in the diagnosis, study, prevention or treatment of diseases associated with decreased expression of functional SPTW, e.g. actinic Keratosis, arteriosclerosis, bursitis, oirrhosis, hepatitis, olycythemia vera, primary thrombocytopenia, anaemia, psoriasis, cancers including adenocarcinoma, thrombocytopenia, anaemia, psoriasis, cancers including adenocarcinoma, leukaemia, myeloma or sarcoma, immune system disorder such as acquired immunodeficiency syndrome (AIDS), allergies, asthma, Crohn's disease, diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, gout, Hashimoto's thyroiditis, hepatitis, multiple sclerosis, osteoporosis, pancreatitis, Reiter's syndrome, autoimmune thyroiditis or rheumatoid arthritis, neurological disorders such as epilepsy, stroke, Alzheimer's disease, other developmental disorder of the central nervous system, mental disorder including mood, anxiety or schizophrenic disorder, mental disorder. The polynucleotides may be used in

Example 2; SEQ ID NO 2818; 1185pp; English.

The invention the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the nuclein and compasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody capability and compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or invention further discloses methods of peventing, treating or ameliocating a medical condition, kits comprising polymoclectide probes and/or monoclonal antibodies for carrying out the methods of the invention of antibodies for carrying out the methods of the invention are and/or monoclonal antibodies for carrying out the methods of the invention or activity of the polymolectide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention are appropriated and polypeptides encoded by the contigs (ADC32628 ADC33841. The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, foresists, genemic disorders or other capacits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and maino acid sequences. They are also used for treating diseases und amino acid sequences or cancer The mucleic acids and produces, pathoparcs, antenna, placelet the mucleic acids and animo acid sequences or their capaciders, woundes, burns, ulcers, osteoporosis, autominance or and scales or and disorders, which is a supported and an acids and animo acid sequences or and sorders or other and should be acids and other neurodegenerative diseases, anaemia, placelet and other neurodegenerative diseases, anaemia, placelet and animo acids and animo acids and animo acids and animo acids and animo acids and acids and animo acids and acids and acids and acids and acids and acids and acids and acids and acids and acids and acids and acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SAIEMMDPKMDAGMIGNQVNRKVLNFEQAIKDGTIKIKDLTLPELIGIMDTCFCCLITWL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 150
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               90
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and as food supplements. The present sequence represents a human contigencoded polypeptide sequence used in an example of the invention. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
```

The present sequence represents a murine tissue repair protein. Tissue repair gene polymucleotides are useful for determining expression of mRNA in selected target tissue, e.g. for diagnosing and treating orofacial clefting. They are also useful for determining the presence of DNA mutations in parients suffering from, or suspected to be suffering from orofacial clefting. The antibodies are also useful in the diagnosis of orofacial clefting. The polymucleotide is also useful for promoting wound

healing and tissue repair

New human and mouse nucleic acids encoding a tissue repair protein, useful for diagnosing and treating orofacial clefting, and for promoting wound healing and/or tissue repair.

The invention relates to compositions and methods for the diagnosis and therapy of cancer, particularly colon cancer. The invention also provides colon tumour proteins and to polymucleotides encoding such proteins. Polymucleotides of the invention are useful for preventing, diagnosing and/or treating cancer, particularly colon cancer in a patient. They are used in gene therapy and also to prepare vaccines. The present sequence is human colon tumour protein
                                                                                                                                                                                                                                                                                                                                                                           570 HVVQLPPEPVQVLHRQQSQPAKESSPPREEAPPPPPPPPPDSCAKKPRSRTKISLEALGIL 629

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human and mouse nucleic acids encoding a tissue repair protein, useful for diagnosing and treating orofacial clefting, and for promoting wound healing and/or tissue repair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 repair gene polynucleotides are useful for determining expression of mRN in selected target tissue, e.g. for diagnosing and treating coofacial clefting. They are also useful for determining the presence of DNA mutations in patients suffering from, or suspected to be suffering from corforaial clefting. The antibodies are also useful in the diagnosis of orofacial clefting. The polynucleotide is also useful for promoting woun healing and tissue repair
                                                                                                                                                                                                                                                                    Tissue repair protein; orofacial clefting; wound healing; tissue repair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              186 MNOSTLAKECPLSOSMISSIVNSTYYANVSATKCOEFGRWYKKYKKIKVERVERENLSDY

The present invention describes a predictor set comprising a plurality of polymucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase pathway. Also described: (1) predicting whether a compound is capable of medulating the activity of cells, comprising obtaining a sample of cells, determining whether the cells express a plurality of markers, and correlating the expression of the markers to the compound's ability to correlating the expression of the markers to the compound's ability to correlate the activity of the cells; (2) a plurality of cell lines for identifying polymucleotides and polypeptides whose expression levels correlate with compound sensitivity or resistance of cells associated with a disease state, and (3) identifying polymucleotides and collypeptides that predict compound sensitivity or resistance of cells associated with a disease state, comprising subjecting the plurality of cells interest of coll interest of compounds, analysing the expression pattern of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                153
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 325

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LSPQLSPQLVRQQIAMAHLINQQIAVSRLLAHQHPQAİNQQFLNHPPIPRAVKPEPTNSS 385
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a microarray of polynucleotides or polypeptides, and selecting polynucleotides or polypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of the microarray. The polynucleotides any polynucleotides have cytostatic activities, and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IQIHGHNRARQRDKLGHILEBFATLQDBFMTFYFNRABKVDAALHTMLLKQEPQRQHLAC 495
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The polymucleotides and polypeptides are useful in predicting the activity of compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase pathways. These may be used in determining drug sensitivity in patients to allow the development of individualized genetic profiles which aid in treating diseases and disorders (e.g. cancer) based on patient response at a molecular level. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |: | : | : | | : | | : : EQLDGSLEYDNREHAEFVLVRKDVLFSQLVETALLALGYSHSSA-AQAQGIIKLGRWNP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nonsense-mediated mRNA decay gene and protein - used to develop methods for inhibiting the decay pathway for producing heterologous or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mediated mRNA Decay pathway. The protein, Nmd2p, binds to Upflp. A C-terminal fragment of the protein (AAT31994) also binds Upflp and, when overexpressed in the host cell, the fragment inhibits the function of Upflp, thereby inhibiting the nonsense-mediated mRNA decay pathway
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 35 KRNTGFIKKLKKGFVKGSESSLLKDLSEASLEKYLSEIIVTVTECLLNVLNKNDDVIAAV

NMD2 and discovered NMD2 gene (see AAX25601) of Saccharomyces cerevisiae. NMD2 named after its role in the nonsense-mediated mRNA decay pathway. A cterminal fragment of Nmd2p also binds to Upflp and, when overexpressed in a host cell, inhibits the function of Upflp, thereby inhibiting the nonsense-mediated mRNA decay pathway to methods of inhibiting the nonsense-mediated mRNA decay pathway to methods of inhibiting the nonsense-mediated mRNA decay pathway to would cause an increase in the transcript decay rate. Such stabilisation also relates to methods of inhibiting the transcript decay rate. Such stabilisation also allows increased translation from the transcript, and is therefore useful for the production of a recombinant protein. The invention also relates to methods of identifying molecules that inhibit the nonsense-mediated mRNA decay pathway, and the use of such molecules (e.g. the C-terminal fragment of Nmd2p or an antisense molecule) for treatment of disorders associated with nonsense mutations, such as breast cancer, polycystic kidney disease I and II. Niemann-Pick disease, adenomatous polyposis coli, cystic fibrosis, Fanconi's anaemia, haemophilia, hypercolommia, neurofibromatosis, ornithine transcript mannance afficiency actions in perceiphromatosis, ornithine transcripting and afficiency actions and antisense molecules is ornithine transcripting and afficiency actions and antisense molecules is ornithine transcripting and afficiency and antisense molecules is ornithine transcripting and afficiency and antisense molecules is ornithine transcripting and afficiency and antisense molecules is ornithine transcripting and antisense molecules and antisense molecules and antisense molecules and antisense molecules and antisense molecules and antisense molecules and antisense molecules and antisense molecules and antisense molecules and antisense molecules and antisense and antise

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                06-JUN-2000
```

of the UPP1 and UPP3 genes (proteins Upf1p and Upf3p, respectively) are essential components of this pathway. Mutations in these genes stabilise mENNA containing premature stop codons. The present sequence is the NWD2 gene protein from Saccharcomyces cerevisiae: NMG2p. The carboxy terminal of this protein from Saccharcomyces cerevisiae: NMG2p. The carboxy terminal consense-mediated mENNA decay pathway is a useful means of treating disorders caused by the presence of nonsense mutations, e.g. breast cancer, polycystic Kidney disease, Niemann-Pick disease, adenomatous polyposis coli, cystic fibrosis, Fanconi's anaemia, haemophilia, hypercholesterolaemia, neurofibromatosis, ornithine transcarbanylase deficiency, retinoblastoma, glycogen storage disease, McArdle disease, colorectal cancer, Tay-Sachs disease, Cowden disease, Wilson disease, colorectal cancer, Tay-Sachs disease, Cowden disease, Wilson disease, colorectal cancer, Tay-Sachs disease, Cowden disease, Purcot carcinoma, Li-Fraumeni syndrome, Maple syrup urine disease, Turcot syndrome or beta-thalassaemia. Antisense mENNA molecules complementary to the NMD2 gene may be used for antisense mena manipulated for ribozyme therapy of the above mentioned disorders: ribozymes designed to catalytically cleave nonsense-mediated mENNA decay pathway mENNAs e.g. NMD2 mENNA, can also be used to prevent translation and therefore expression of these mENNAs. 256 58 EAMSAI-EMMDPKWDAGMIGNQVNRKVLNFEQAIKDGTIKIKDLTLPELIGIMDTCFCCL 116 193 156 -----ICDIAREKVNK-AAVFEEED--FQSMTYGFKMANSVTDL------RVTGM 196 AVAEAQKLMVQAADLLSAIHNSLHHGIQAQNDTTKGDHPIMMGFEPLVNQRLLPPTFPRY 316 317 AKIIKREEMVNYFARLIDRIKTVCEV------VNLTNLHCILDFFCEFSEQSPCVL 366 :: : |: | : | : | : | 335 QRLWENEDTRKFYEILPDISKTVEERQSSKTEKDSNVNSKNINL---FFTDL-EMADC-- 388 118 KDCIDSFVTHCVRPFCSLIQIHGHNRARQRDKLGHILEEFATLQDEFMTFYFNRAEKVDA 477 478 ALHTMILKQEPQRQHLACLGTWVLYHNLRIMIQYLLSGFELELYSMHEYYYIYWYLSEFL 537 538 YAWLMSTLSRADGSQMAEERIMEEQQKGRSSKKTKKKKKVRPLSREITMSQAYQNMCAGM 597 -----PDFIE-----DPAMKAFALGILK- 155 296 AITLGEFFKLEIPELEGASNDDL-----KETA-----SPMITNQILPPN--- 334 94 194 KFKLGFTTTIATAFIKKFAPLFRDDDNSWDDLIYDSKLKGALQSLFKNFIDATFARATEL -----HDKLFGLF 35 KRNTGFIKKLKKGFVKGSESSLLKDLSEASLEKYLSEIIVTVTECLLNVLNKNDDVIAAV | :| : : : : : : | | | | | : : : | | | | | ELISGLHQRFTSPLLG-----QR 367 SRSLLQTTFLVD--NKKVFGTHLMQDMVKD-ALRSFVDP-----PVLSPKCYLYNNHQA Query Match 3.3%; Score 127; DB 3; Length 1089; Best Local Similarity 17.6%; Pred. The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Conservative 116; Mismatches 246; Indels 264; Gaps

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              178
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             549
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    336

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this spatent did not appear in the printed specification, but was obtained in the printed specification, but was obtained in ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |: | ::: : : | |: | |: : : | | | |: : : | | | |: : : | | | |: : : | | | |: : : | | | |: : : | | | |: : : | | | |: : : | | |: : : | | |: : : | | |: : : | | | |: : : | | | |: : : | | |: : : | | |: : : | | |: : : | | |: : : | | |: : : | | |: : : | | |: : : | | |: : : : | |: : : | |: : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : : | |: : : : | |: : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : | |: : : : | |: : : | |: : : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : : | |: : : : | |: : : : | |: : : | |: : : | |: : : | |: : : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : | |: : : : | |: : : : | |: : : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : : | |: : : :
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 272 TIYQNLWDAFKA-----VCRGKFVALNAHKRKQERSKIDT-LISQLKELEKQEQTHSKAS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cgn2_6/ptodata/2/pubpaa/US07_PUBCOMB.ppp:*

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
